Manual Freeform dialog box. Specify a custom name for the scan in the ID box if you don't want to use the default name. If you're using a CAD model, type a Find Nominals tolerance in the Find Nominals Control area. This defines how far away the actual ball center point can be from the nominal CAD location.

## **Performing a Manual Freeform Scan**

PC-DMIS mirrors the CAD drawing in the specified axis and displays the image in the Graphic Display window. Mirrored Elements in CAD Assemblies . If you open the CAD Assembly dialog box, you can see that your original imported image name has the number 1 appended to its name. Any CAD transformation that creates a new instance of the same CAD file (such as a mirror operation) is then incremented to have a unique number.

## **Transforming a CAD Model**

The key to synchronizing CAD and program alignments is that the CAD coordinates must match the initial alignment feature coordinates. If the manual alignment features are at X, Y, Z zero then simply use the CAD transformation dialogue to make the CAD features that match the alignment features X, Y, Z zero.
